

ASIP

Reactivity:Human Mouse

Tested applications:IHC IF

Recommended Dilution:IHC 1:50 - 1:100 IF 1:50 - 1:100

Calculated MW:15kDa

Observed MW:Refer to figures

Immunogen:

Recombinant protein of human ASIP

Storage Buffer:

Store at -20. Avoid freeze / thaw cycles. Buffer: PBS with 0.02% sodium azide, 50% glycerol, pH7.3.

Synonym:

ASP; AGSW; AGTI; AGTIL; SHEP9;

Background:

In mice, the agouti gene encodes a paracrine signaling molecule that causes hair follicle melanocytes to synthesize pheomelanin, a yellow pigment, instead of the black or brown pigment, eumelanin. Pleiotropic effects of constitutive expression of the mouse gene include adult-onset obesity, increased tumor susceptibility, and premature infertility. This gene is highly similar to the mouse gene and encodes a secreted protein that may (1) affect the quality of hair pigmentation, (2) act as a pharmacological antagonist of alpha-melanocyte-stimulating hormone, (3) play a role in neuroendocrine aspects of melanocortin action, and (4) have a functional role in regulating lipid metabolism in adipocytes.

Catalog #:A6872

Antibody Type:

Polyclonal Antibody

Species:Rabbit

Gene ID:434

Isotype:IgG

Swiss Prot:P42127

Purity:Affinity purification
