

## MMAB Human

**Description:**MMAB Recombinant Human produced in E.Coli is a single, non-glycosylated polypeptide chain containing 239 amino acids (33-250 a.a.) and having a molecular mass of 26.3 kDa. The MMAB is fused to 21 amino acid His-Tag at N-terminus and purified by proprietary chromatographic techniques.

Catalog #:ENPS-255

For research use only.

**Synonyms:**CBIB, Cob(I)alamin adenosyltransferase, EC 2.5.1.17.

**Source:**Escherichia Coli.

**Physical Appearance:**Sterile Filtered clear solution.

**Amino Acid Sequence:**MGSSHHHHHH SSGLVPRGSH MQSRGPQGVE DGDRPQPSSK  
TPRIPKIYTK TGDKGFSSSTF TGERRPKDDQ VFEAVGTTDE LSSAIGFALELVTEKGHTFA  
EELQKIQCTL QDVGSALATP CSSAREAHLK YTTFKAGPIL ELEQWIDKYT SQLPPLTAFI  
LPSSGGKISSA LHFCRAVCRRAERRVPLVQ MGETDANVAK FLNRLSDYLF TLARYAAMKE  
GNQEKIYKKN DPSA

**Purity:**Greater than 95.0% as determined by SDS-PAGE.

**Formulation:**

MMAB 1mg/ml protein solution contains 20mM Tris pH-7.5 & 10% glycerol.

**Stability:**

MMAB Human although stable at 4°C for 1 week, should be stored below -18°C. Please prevent freeze thaw cycles.

**Usage:**

NeoBiolab's products are furnished for LABORATORY RESEARCH USE ONLY. The product may not be used as drugs, agricultural or pesticidal products, food additives or household chemicals.

**Introduction:**

MMAB protein catalyzes the last step in the conversion of vitamin B(12) into adenosylcobalamin (AdoCbl), a vitamin B12 containing coenzyme for methylmalonyl-CoA mutase(MCM). Decreased MMAB activity leads to the inherited disorder vitamin B12 dependent methylmalonic aciduria linked to the cblB complementation group.
