

## PMVK Human

**Description:** PMVK Human Recombinant fused with a 20 amino acid His tag at N-terminus produced in E.Coli is a single, non-glycosylated, polypeptide chain containing 212 amino acids (1-192 a.a.) and having a molecular mass of 24.1kDa. The PMVK is purified by proprietary chromatographic techniques.

**Catalog #:** PKPS-315

For research use only.

**Synonyms:** Phosphomevalonate kinase, PMKase, hPMK, PMVK, PMKI, PMK, PMKA, PMKASE, HUMPMKI.

**Source:** Escherichia Coli.

**Physical Appearance:** Sterile Filtered colorless solution.

**Amino Acid Sequence:** MGSSHHHHHH SSGLVPRGSH MAPLGGAAPRL VLLFSGKRKS  
GKDFVTEALQ SRLGADVCAV LRLSGPLKEQ YAQEHGLNFQ RLLDTSTYKE AFRKDMIRWG  
EEKRQADPGF FCRKIVEGIS QPIWLVS DTR RVSDIQWFRE AYGA VTQTVR VVALEQSRQQ  
RGWVFTPGVD DAESECGLDN FGDFDWVIEN HGVEQRLEE Q LENLIEFIRS RL.

**Purity:** Greater than 95.0% as determined by SDS-PAGE.

### Formulation:

The PMVK solution (1 mg/ml) contains 20mM Tris-HCl buffer (pH 7.5), 1mM DTT, 10% glycerol and 0.1M NaCl.

### Stability:

PMVK should be stored desiccated below -18°C. For long term storage it is recommended to add a carrier protein (0.1% HSA or BSA). Please prevent freeze-thaw cycles.

### Usage:

NeoBiolab's products are furnished for LABORATORY RESEARCH USE ONLY. The product may not be used as drugs, agricultural or pesticidal products, food additives or household chemicals.

### Introduction:

Phosphomevalonate kinase (PMVK) is a cytosolic enzyme. PMVK is expressed highly in the heart, liver, skeletal muscle, kidney and pancreas and slightly lower in the brain, placenta, and lung. PMVK catalyzes the conversion of mevalonate 5-phosphate into mevalonate 5-diphosphate in the fifth reaction of the cholesterol biosynthetic pathway. Induced by sterol, PMVK participates in isopentenyl diphosphate biosynthesis via the mevalonate pathway.
